

FRANKLIN INSTITUTE @ HOME

RESOURCES

This time of year is usually full of amazing Franklin Institute field trips, which create memories for your students that last a lifetime. With those trips not happening this year, the Franklin Institute is providing a number of fun, educational resources that can be shared virtually with teachers, students and their families to bring a little bit of Franklin Institute to you! The [Franklin @ Home](#) series is dedicated to providing many fun, interesting, engaging and **FREE** activities for K-12 students and teachers. Here are some highlights:

[Science Recipes](#) – Simple and interactive lessons that encourage kids to explore at home, using simple materials people can find at home.

[Spark of Science Videos](#) – Our science interpreters perform some of their favorite experiments by taking complex topics and boiling them down so they are easy to understand. Whether interested in a specific topic or science in general, these are perfect to share with students and parents alike.

[Activate Your Brain](#) - Interactive online activities from our Your Brain exhibit, where students can learn about their own brains!

[Go Live with Our Scientists](#) – opportunities to hear directly from our scientists about COVID-19, observing the night sky, and environmental science issues.

[Bad Science](#) – Take science myths and see whether we can prove them wrong!

[Franklin Institute Exhibits](#) – Click here for a list of all of our exhibits and create your own virtual field trip! We even have [Educator Exhibit Guides](#) with pictures, activities and examples of what you would learn inside our building! No field trips this year? These guides figuratively put you into the museum to get you up close to the science action.

While the museum remains closed, the Franklin Institute team is working hard behind the scenes and readily available to discuss, plan, and look ahead to a time when they can host schools again at The Franklin Institute. The best way to keep in touch with all of their activities and offerings is by subscribing to their email list by clicking here: [Join Email List Here](#). You'll be informed about all their new events and amazing resources.
